SciTech SNAP Graphics ENT/BC:

DPVL SUPPORT

SciTech SNAP Graphics & EIZO Displays
Providing Advanced Multi-Display Support for the Transactional Desktop

SciTech SNAP Graphics ENT/BC

SciTech SNAP Graphics ENT is a server-based driver solution designed to make business leaner and more efficient. Centralized graphics driver management allows for a dramatically simplified support model, upgrades to the driver need only be installed once and will be instantly available to all attached and licensed machines. Deployment costs are reduced, with simple to use, install and forget drivers. By utilizing SciTech SNAP Graphics ENT/BC in Blade Client environments, IT Managers can upgrade users quickly and inexpensively by updating a single hosted license file on the server. Not only does this provide a more controlled and secure environment, technical support costs can be greatly reduced by utilizing a single driver solution across the entire client environment regardless of variations in graphics hardware.

SciTech SNAP Graphics ENT/BC includes the addition of **advanced VESA Digital Packet Video Link (DPVL) support**. This feature, when used in conjunction with VESA DPVL capable displays, such as those under development by EIZO (scheduled for release in June 2006) allows the driver to drive up to eight DPVL compatible displays through a single cable connection to the client machine. This powerful fact means that cost savings can be realized up front through the use of off the shelf graphics hardware solutions as well as over the life of the system through a reduction in energy use, space savings and lower heat dissipation due to the simplified hardware requirements.

SciTech SNAP Graphics ENT/BC with DPVL support will change how IT Managers look at multi-display solutions for the financial, medical and informational kiosk environments. Learn More **Visit: www.scitechsoft.com**

Transactional Desktops:
- Trading Room Floors
- Bank Teller Machines
- Call Centers

Medical Systems:
- Imaging Systems
- Patient Information Centers
- Practice Management Solutions

Information Kiosks:
- Airline Flight Information Centers
- Advertising Kiosks
- Menu Boards

Consulting Services:

SciTech offers both an SDK as well as the consulting services required to aid in the process of developing driver solutions for specialized OS'es, platforms and API's. For additional information contact: sales@scitechsoft.com
